

$$f(x) = \frac{1}{x^2} = \underbrace{1 + (-2)\frac{(x-1)}{1!} + 6\frac{(x-1)^2}{2!}}_{1 - 2(x-1) + 3(x-1)^2} + R_2$$

mit dem Restglied

$$R_2=rac{1}{3!}\cdotrac{-24}{\xi^5}ig(x-1ig)^3=-rac{4}{\xi^5}ig(x-1ig)^3$$
 , $1\leq \xi \leq x$

Abschätzung des Restgliedes

$$\left|R_{2}\right| = \left|-\frac{4}{\xi^{5}}\left(x-1\right)^{3}\right| \underset{1 \leq \xi \leq x}{=} \left|-\frac{4}{\xi^{5}}\left|\cdot\left|\left(x-1\right)^{3}\right| \underset{1 \leq \xi \leq x}{\leq} 4 \cdot \left|\left(x-1\right)^{3}\right|$$
